

localToGlobalRotateField

~structure

```
graph LR; A[~structure] --> B[localToGlobalRotateField]
```

A diagram showing a relationship between two entities. On the left is a gray rectangular box containing the text 'localToGlobalRotateField'. On the right is a white rectangular box containing the text '~structure'. A blue arrow points from the white box to the gray box, indicating a relationship or flow from '~structure' to 'localToGlobalRotateField'.
